

# CoreStation CX6620

High Density Remote Workstation

## Benefits and Features

### Key Features

- 2U Chassis with four independent workstation nodes
- Dual 4th Gen Xeon Processors upto 112 total CPU cores
- Upto 4TB RAM in 16 memory channels
- NVIDIA RTX Workstation GPUs
- Fault tolerant power supplies, fans and local storage
- Out-of-band Enterprise Management

### Remote Access

- Designed to meet the requirements of demanding always-remote users
- Integrates easily to existing systems using VMware Horizon, Citrix, HP Anyware or Microsoft RDP
- Configured to give the best remote working experience for your users
- Use the same hardware platform for dedicated 1:1 users, high density Virtual Desktop and virtual app delivery

### Management & Reliability

- Built on the Enterprise Grade DELL PowerEdge C-class 16G platform
- Embedded hardware management and intelligent provisioning with iDRAC Enterprise
- Integrates with Dell Openmanage to administer and manage Workstations from one pane of glass
- Industry-standard APIs including Redfish and SNMP for integration with third-party systems

## Dedicated remote workstation with Dual Xeon 4th Gen CPUs in only 0.5U

### Make the most of your valuable datacenter space

Amulet Hotkey CoreStation CX6620 is a dedicated remote workstation for enterprise users who want to keep their compute resource in the datacenter and need more performance than can be provided with virtualized desktop solutions. Running professional desktop operating systems directly on the hardware without a hypervisor allows the user maximum flexibility and performance to use the workstation as they require, without the constraints of running within a virtual machine. Leveraging the Dell PowerEdge C-class hardware, CX6620 is a modular workstation platform with four independent nodes in a 2U chassis with shared power and cooling. This enables deployment of dedicated workstations in just 0.5U rack space or upto 80 workstations in a modern datacenter rack.

### Performance that scales to any workload

User groups and individuals' workloads vary in every business, creating different requirements from their workstations. CoreStation CX6620 is highly configurable to meet those needs and requirements. Single or Dual Intel Xeon 'Sapphire Rapids' 4th Gen processors with up to 112 total cores and 16 channels of DDR5 4800 memory, provide the performance to handle the most demanding sustained workloads and largest datasets. Whether you prefer to work locally using the internal NVMe SSDs, Hot-swap E3.S drives or over the network using 25Gbit/s links to remote storage, CX6620 has a configuration which provides access to your data at the highest speed.

WorkStation graphics is provided by a selection of NVIDIA RTX professional GPUs, depending on what best fits your application. Alternatively, CX6620 can be configured with Datacenter GPUs from NVIDIA and Intel for use with AI, CUDA or OpenCL processing, or for running hardware accelerated virtual machines.

### Easy to deploy, manage and maintain

If you are looking for a higher-performance companion to an existing VDI solution, CX6620 easily integrates with a wide range of existing remote session brokers including Citrix, Horizon and Leostream, avoiding the need to manage VDI and 1:1 users differently.

To maximize uptime and reduce the need for time-sensitive servicing, ECC memory, RAID 1 storage, fault tolerant-fans and power supplies allow the user to continue working, even in the rare event of a hardware failure.

Enterprise out-of-band management with Dell iDRAC makes it simple to install, setup, manage and maintain the workstation, even when deployed in a remote location with no easy access. Dell Open manage suite enables a whole deployment of CX6620 workstations to be managed together, simplifying system updates, preventative maintenance and reducing downtime.

Support

[www.amulethotkey.com/support](http://www.amulethotkey.com/support)

Specifications

Form Factor	2U rackmount chassis with four individual workstation nodes, shared power and cooling, 800mm depth
Processors	Dual 4th Gen Intel Xeon Scalable Processors, 8 to 112 cores total
Memory	Up to 16 DDR5 4800 MT/s ECC DIMMs, 2TB max capacity
Graphics	NVIDIA RTX A2000 6GB/12GB NVIDIA T1000 4GB/8GB NVIDIA RTX 4000 ADA 20GB
Operating Systems	Microsoft Windows 10/11 Pro
Internal Storage	M.2 NVMe Gen 3 upto 4TB with optional hardware RAID
Hot-swap storage bays	Two Hot-swap E3.S NVMe Gen 5 upto 15TB with RAID
Networking	Dual 10G/25G network connections supporting direct attach cable, copper Cat 6A and fiber connections up to 10km Dedicated 1G Management network port
Embedded Server Management	Dell iDRAC Enterprise out-of-band management including browser based workstation management and centralised management tool for managing multiple systems.
Power Supplies	Dual Hot-Plug fault-tolerant or redundant power supplies shared between four nodes. Options for 110V/230V/277V AC and 240V/336V DC.
Power Consumption	500W - 1000W maximum per node, depending on configuration.
Operating Conditions	10°C to 27°C (50°F to 80°F) ambient temperature. Higher ambient possible with certain configurations.
