## Simple and easy to use

Amulet Hotkey Trusted Zero Clients maintain the same intuitive user experience as the DXZC and DXZ4 zero clients, making it easy to connect to virtual or physical remote desktops. The remote session can be established using either PCoIP to a host running HP Anyware or VMware Blast to a host running Horizon.

## Ready for Zero Trust

The DXZ130 and DXZ160-R clients regularly check in with the HP Anyware Trust Center to provide continuous, real-time authentication of client firmware, configuration and security policy.

## Strongly managed client solution

With a single pane of glass for displaying the status of all clients, it's easy to manage configuration, security policies and firmware updates from a central location ensuring that all users and clients are in compliance and up to date.

## Designed for security

Based on many years of experience with DXZC And DXZ4 Zero Clients, Amulet Hotkey Trusted Zero Clients are based on a minimal, hardened Linux firmware dedicated to remote access with no route for users to install applications. No user data is stored on the client at any time and only pixel data is sent over the wire between the remote desktop and the client.
